

THREAT ADVISORY SERVICES

KEY SERVICE COMPONENTS

- **Threat and Vulnerability information** based on disclosed information, SecureData’s own research, open-source information, threat feeds, partner and proprietary threat intelligence feeds
- **Correlation of new intelligence** against an organisation’s assets via pre-defined tags where appropriate
- **Advisory triage and analysis to determine:**
 - o Accuracy
 - o Significance
 - o Relevance
 - o Urgency
- **Succinct advisories in the following categories:**
 - o Significant, relevant new vulnerabilities,
 - o New Threats
 - o Significant Data Breaches
 - o Developing situations
 - o Cautions
 - o Targetted Advisories specific to individual customers (where appropriate),
 - o Updates to existing advisories
 - o Detailed long-form analysis of selected significant intelligence.
- **Standard advisories including the following fields:**
 - o Category
 - o Urgency
 - o What you will hear
 - o What it means
 - o Tags
 - o Read More
 - o Indicators of Compromise
- **A monthly Executive Summary report** summarises key events for the month and captures significant long-term trends, including:
 - o Analyst commentary on the month
 - o Summary of Signals for the month by Type, Urgency & Tag
 - o Monthly summary of Signals per day by urgency
 - o Summary of Analyses for the month
 - o Trackers for key themes, e.g. Malware / Ransomware
 - o Breach and incident histories
 - o Additional commentary piece to guide planning for the month ahead

SERVICE DESCRIPTION

Modern Cyber Security operations involve ingesting and processing a huge amount of information from diverse sources. These various data points are used to by security teams to make minute-by-minute decisions on how to spend scarce time and resources. The wrong decision leaves the organisation exposed whilst precious time, money and energy are wasted.

With the landscape constantly changing and the adversary constantly evolving, a wrong decision, or a delayed decision can have devastating consequences. Businesses need sound intelligence with which to make sound decisions. Not too much, but not too little. Not too soon, but not too late. For Threat Intelligence to be actionable it must be accurate, relevant, clear and timely. This is the basis of every effective modern security operation.

SecureData’s Threat Advisory Service works on behalf of the customer to:

- collect,
- analyse,
- prioritise,
- contextualise and
- summarise

global, geographical and vertical threat and vulnerability intelligence to provide actionable security intelligence relevant to the business, it’s infrastructure, processes and applications.

The service takes in a continuous stream of data from a variety of open, commercial and proprietary data sources. The streams are manually triaged and distributed to provide the essential threat and vulnerability data our customers need to make good decisions, whilst filtering out the “F.U.D” and other hyperbole that can distract and disorient security operations teams.

KEY BENEFITS & DELIVERABLES

- **Intelligence collection and analysis:** Analysts collect, triage and review multiple sources to determine relevance to specific business environments
- **Regular Security Intelligence Signals:** Relevant and significant short-form alerts called ‘Signals’ are published to the portal as soon as they have been verified, analysed and appropriately categorised.
- **Occasional long-form analysis:** Occasional long-form analysis papers are produced where the issue is considered significant enough or coverage from conventional sources (e.g. popular media) is lacking.
- **Occasional customer advisories:** Where Signals can be directly linked to specific customers then an Advisory is generated and pushed directly to the predefined recipients.
- **Additional Support:** Additional UK Business Hours support is available via email or the portal to assist with clarification or elaboration of specific Signals.
- **Monthly Report:** Detailed monthly reports including an executive summary of developments for that month and long-term trends.

WHY SECUREDATA

Cybersecurity specialists

SecureData specialises in cybersecurity services and solutions, with a 25-year track record of delivering managed services to some of the largest companies in the world.

Outstanding expertise

Our Managed Firewall service is delivered by our UK-based SOC - delivering immediate, 24x7x365 access to their technical experts who deal with device health incidents, requested and recommended changes, security optimisation and help ensure continuous availability.

Extensive security insight

SecureData's Threat Intelligence platform processes over 30 billion security events per month, giving us unparalleled access to current and emerging threats. SensePost, our elite consulting arm, is at the forefront of cybersecurity - providing insight into the criminal mind-set. We use this information to ensure our Managed Firewall customers are as secure as they possibly can be.

Vendor insights

Our close partnership with Check Point, Fortinet, Cisco and Palo Alto Networks provides superior access to their technical experts and product roadmaps - keeping our SOC's knowledge ahead of the game.

Complementary services

We offer a broad range of services that complement our Managed Firewall service and strengthen your security posture, including Managed IDS/IPS, Managed Threat Detection, Managed Vulnerability Scanning and Managed Compliance Monitoring.

ABOUT SECUREDATA

SecureData is a leading provider of cybersecurity services and solutions.

SecureData looks beyond point technologies to address cybersecurity as a whole. The company offers a comprehensive set of professional and managed security services across the entire attack continuum.

For over 25 years SecureData has been helping organisations assess risks, detect threats, protect assets and respond to breaches quickly and effectively ensuring essential IT infrastructure always remains secure and available.

SensePost, the consulting arm of SecureData includes some of the world's most preminent cybersecurity experts. Trusted by both corporate and military organisations across multiple countries, SensePost helps organisations to protect IT infrastructure and stay ahead of evolving cybersecurity threats.

Operating across the UK, South Africa and the USA, SecureData has an enviable track record having delivered cybersecurity services for many business sectors including finance, insurance, retail, property, professional services, technology and government.
